

Microphysics flight report 08/24

Submitted by **abansemer** on Tue, 08/24/2010 - 19:43

- **CAPS/CSI/PIP**

Flight Date:

Tuesday, August 24, 2010

We collected good data with CAPS, CDP, and RICE, including a high altitude spiral descent/ascent (30-40K feet), and many long level legs in convective anvils.

The PIP laser failed about 1.5 hours after take-off during a convective pass and was not operational for the remainder of the flight. The instrument has been shipped for repair and is expected to be ready for a potential Saturday flight.

CSI not flown.

Status:

Yellow
